

Samuel Farrington

Javascript-1 Written

- Github URL: https://samfarrington-tufts.github.io/js_1/js_part1.html
- I was able to complete all problems on this assignment
- I felt that I had a good understanding of the coding concepts in this assignment. The logic behind printing every odd number in the given range was the most challenging because I wanted to include the print statement and the summation calculations inside the loop. Once I remembered using the modulo operator in previous classes to provide similar functionality to what Problem 4 was asking, I was able to solve the problem quickly.
